EDUCATION

Virginia Tech

B.S. Computational Modeling and Data Analytics | **Minor:** Computer Science

Northern Virginia Community College

A.S. General Engineering | GPA: 3.4

Blacksburg, VA

December 2025

Annandale, VA

May 2019

TECHNICAL SKILLS

Languages: Python | Java | SQL | JavaScript | C++ | C | R | HTML/CSS | Verilog | MATLAB | Dart |

Frameworks & Tools: Flask | BeautifulSoup | Flutter | Jakarta EE | RESTful APIs | Git/GitHub |

Cloud & Databases: AWS (EC2) | MySQL | PostgreSQL | WildFly | Azure |

Data & Analytics: Excel | ArcGIS | Data Pipeline Automation | ETL Processes |

EXPERIENCE

Virginia Tech

Research Assistant | LEWAS Lab

Blacksburg, VA

May 2019 – August 2019

- Developed Python workflows to validate 10,000+ sensor records, ensuring accuracy and reliability of environmental data
- Automated real-time data transmission using Arduino-to-Python data pipelines, improving processing efficiency by 25%
- Built interactive ArcGIS dashboards to visualize system outputs, enabling faster interpretation and technical decision-making

Fairfax County Park Authority

Manager on Duty

Reston, VA

May 2017 – May 2019

- Supervised 250+ staff across rotating shifts, ensuring safety, compliance, and efficient daily operations
- Managed facility operations, scheduling, and financial reporting in a high-traffic public environment
- Improved resource allocation strategies, reducing operational downtime by 15% through planning optimization

Latin Tax Inc

Technician Assistant

Alexandria, VA

January 2017 – May 2017

- Provided hands-on technical support for Windows systems and Drake Tax software in a fast-paced production environment
- Installed, configured, and maintained secure software systems with updates, patching, and malware prevention protocols
- Documented recurring system issues, resolutions, and changes, improving troubleshooting efficiency and knowledge sharing

PROJECTS

American Statistical Association | Virginia Tech Capstone Project

Blacksburg, VA

Automated Graduate Program Discovery Platform

August 2025 – December 2025

- Built an end-to-end data pipeline using Python, PostgreSQL, and Flask to automate graduate program data collection
- Developed scalable web scrapers with BeautifulSoup and Requests, achieving 95% accuracy across validation runs
- Designed RESTful API endpoints to support dynamic querying, filtering, and retrieval of structured data
- Deployed application on AWS EC2, configuring backend services and ensuring reliable cloud-based access

Cloud-Based Web Application | Cloud Software Development

Blacksburg, VA

Meal Planner Cloud Application

November 2025 – December 2025

- Collaborated in a 5-person Agile team to develop a cloud-based meal planning and nutrition tracking web app for students
- Integrated Kroger and TheMealDB APIs to support recipe discovery, ingredient pricing, nutritional analysis, and dynamic meal cost calculations
- Implemented user authentication, CRUD database operations, multilingual support, PDF/CSV export functionality, and automated email notification using Jakarta EE and MySQL
- Deployed the application on AWS EC2 with responsive UI components, REST-based integrations, and secure password hashing for scalable cloud accessibility.

Books Cloud Application

October 2025

- Built and designed a full-stack Java web application using Jakarta EE, XHTML, MySQL, and AWS cloud infrastructure
- Implemented REST-style backend services integrating Google Books API for dynamic data retrieval and persistent storage
- Optimized backend and frontend logic, API calls, and database queries to reduce application response latency by 20%

Data Structures & Algorithms

Blacksburg, VA

Social Media Visualization Tool

December 2023

- Collaborated with a team of four to develop a modular Java application to create a window that can be a data visualization tool with functional systems that analyze and sort engagement metrics from a structured social dataset
- Implemented linked lists and custom sorting algorithms to compare follower growth, interaction rates, and engagement
- Refactored codebase to improve readability, maintainability, and separation of concerns following software design basis
